

SPECIALTY SOLUTION #114

ENTERTAINMENT

- 25 foot per minute travel rate for scissor lift
- 8,000 lb capacity
- Hydraulic actuation
- 108” vertical travel
- Operated by PLC which incorporates the lift speed, rotator (designed by others) and special effects (dry ice and lights)

Largely based on Handling Specialty's reputation in the entertainment industry, Handling Specialty was requested to design and manufacture two lifts to be mounted onto rotators to launch the new Hummer H2 during the major US auto shows. The lifts could be programmed to automatically perform specific "moves" that were choreographed to lights, music and smoke effects during the show. The lifts could also be operated independently by handheld pendant.
